

JET RAPID - THE UNIVERSAL HIGH-SPEED PRINTER

The JET Rapid is the ideal printer for high output and an exceptionally wide variety of applications. It combines top speed with absolute reliability, and it guarantees legible codes and maximum efficiency for production.

Up to five printed lines.
Different fonts and languages.
Fixed and variable data.

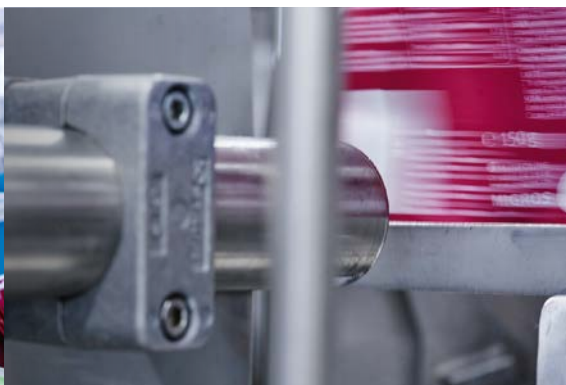

**For use-by dates or batch marking -
the JET Rapid makes highly efficient
production easy and flexible.**

- Packaging films
- Food packaging
- Beverage cans
- Beverage bottles
- Lottery tickets

Keep your production running as fast as possible!

- Increased production thanks to the highest printing speeds ever
- High-quality codes - high legible even at print speeds of up to 800 m/min
- Manufactured to Leibinger's high quality standards
- Various fast-drying inks for different surfaces
- Lowest energy consumption
- Intuitive use with the Windows-based 10.4" touch display
- Easy integration via interfaces such as Ethernet and I/O signals
- Non-impact marking of up to five lines
- Over 800 user-friendly functions
- Any installation position of the print head
- 24-month warranty, guaranteed spare parts availability for 8 years
- All software updates included
- Transparent maintenance and long service intervals
- Minimal solvent consumption and uninterrupted production thanks to SEALTRONIC
- Industry-specific configured models for marking and coding

FASTER THAN FAST - JET RAPID WITH THE SPEED PLUS OPTION

Speed up your production process!

The JET Rapid adapts entirely to your needs and production environment. It supplies print heads that are suitable for a variety of applications and industries.

Options & accessories

- Various nozzle sizes and head versions
- Advanced PC software solutions
- JETmotion traverse system
- Product sensors, encoders, status lights

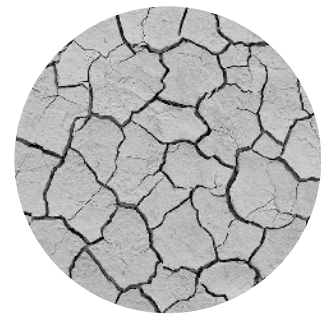

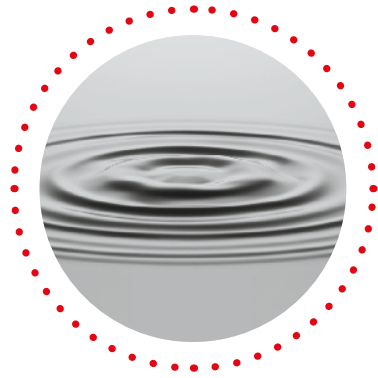

Leibinger developed a special high-speed print head for extremely fast printing applications. It can be used very flexibly for all product surfaces and materials, and it allows a font height of 2 mm (5x5 matrix or chimney marking).

Technical highlights

- Special print head for single-line printing up to 800 m/min
- For special high-speed applications
- Fast drying ink
- SEALTRONIC

SEALTRONIC MAKES CIJ WORK!

All Leibinger continuous inkjet printers are equipped with the SEALTRONIC automatic nozzle sealing system.

With this unique technology, the gutter is moved to the nozzle when the printer is switching off during planned printing downtimes.

This creates an airtight ink circuit, whereby the ink does not dry in the print head. The CIJ printer is always ready for use, and time-consuming and labor-intensive cleaning are no longer needed.

With SEALTRONIC, your printer is always ready for use - even after work breaks or longer downtimes.

- 100% secure protection from ink nozzles blocking.
No drying out of ink.
- Maintenance-free starting without rinsing cycles
- Instant initialization with reliable print quality
- No more need for labor-intensive cleaning
- Production losses can be consistently prevented
- Uses fewer consumables

AT YOUR SERVICE WORLDWIDE

There are more than 150 sales and service partners worldwide – to guarantee real Leibinger service on site everywhere.

Leibinger non-impact CIJ printers mark products with fixed and variable data. All conceivable materials and product surfaces such as plastic, glass, wood, metal, ceramics, technical composites,

cardboard and paper can be marked quickly and efficiently. Special inks are used that dry in less than a second for marking use-by dates, lot/batch numbers, barcodes, 2D codes or even graphics.

German brand quality and engineering expertise have made Leibinger inkjet printers the fastest, most flexible and economical way to mark products without contact during production.
